Layer B — our MBQC vertex counts vs the slide's formulas [vertices = (per-degree) × degree + setup]
Vertices per degree
vertices
data qubits n
GQSP ours: 80n − 40
QSVT: ours = slide = 36n − 18
(lines coincide)
GQSP slide: 12n − 6
One-time setup vertices
data qubits n
QSVT
GQSP
ours (optimized, fitted exactly)
